Dr.Rafaa Aljarbou

WHAT IS CITIZEN CARE SYSTEM?

- A student project developed for CS383 course
- Inspired by Saudi national apps like Tawakkalna and Absher
- A digital platform to simplify access to citizen services
- Designed with 8+ functional requirements and UML modeling
- Focuses on security, usability, and system reliability

PROPOSED FEATURES OF CITIZEN CARE SYSTEM

Digital ID + QR Verification

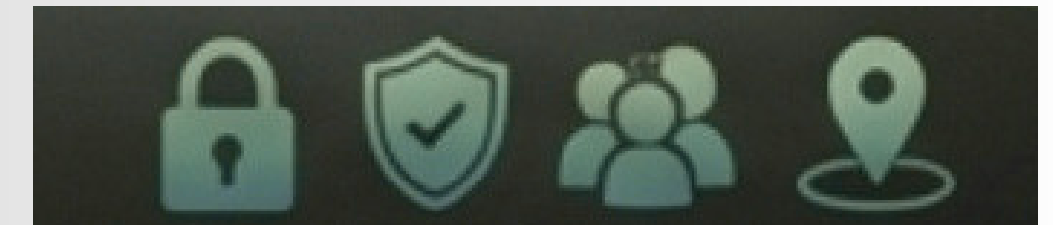

- Vaccination & Health Records
- Appointment Booking
- Family Account Management
- Document Expiry Alerts
- In-App Government Payments
- Emergency Health Profile
- Multilingual (Arabic / English)

SOFTWARE ENGINEERING ETHICS (CITIZEN CARE SYSTEM)

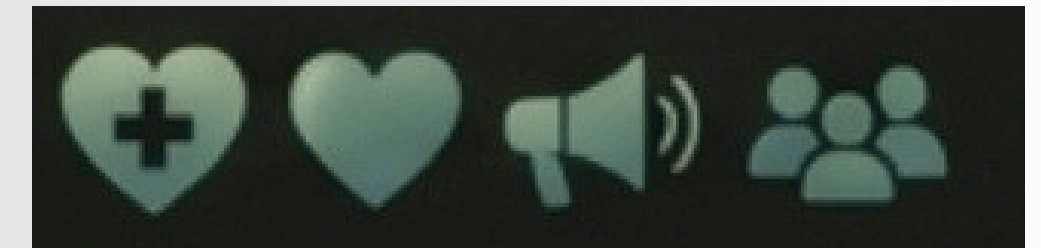

1 DATA PRIVACY & PROTECTION

- **Encryption:** Full protection of sensitive personal/health data.
- **Minimal Access:** Location data used only when strictly required.

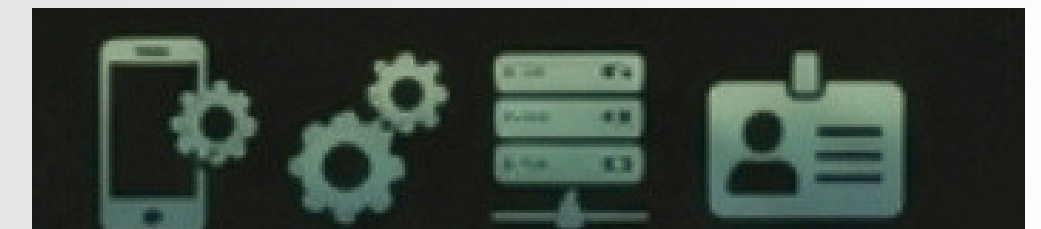

2 PUBLIC INTEREST & SAFETY

- **Safety First:** Prioritizing community well-being in crises.
- **Accurate Alerts:** Real-time information to reduce public risk.

3 QUALITY & DIGITAL SECURITY

- **High Reliability:** Stable performance for official services.
- **TLS 1.3:** Modern standards for secure digital identity.

4 INTEGRITY & FAIRNESS

- **Fair Algorithms:** Ensuring equality in service issuance.
- **Transparency:** Continuous code reviews and system audits.

SOFTWARE PROCESS MODEL

Chosen model : Agile

Why Agile for Citizen Care System?

1

Requirements change frequently and new services are added continuously.

2

Agile helps respond quickly to emergencies and updates.

3

User feedback can be collected and applied fast.

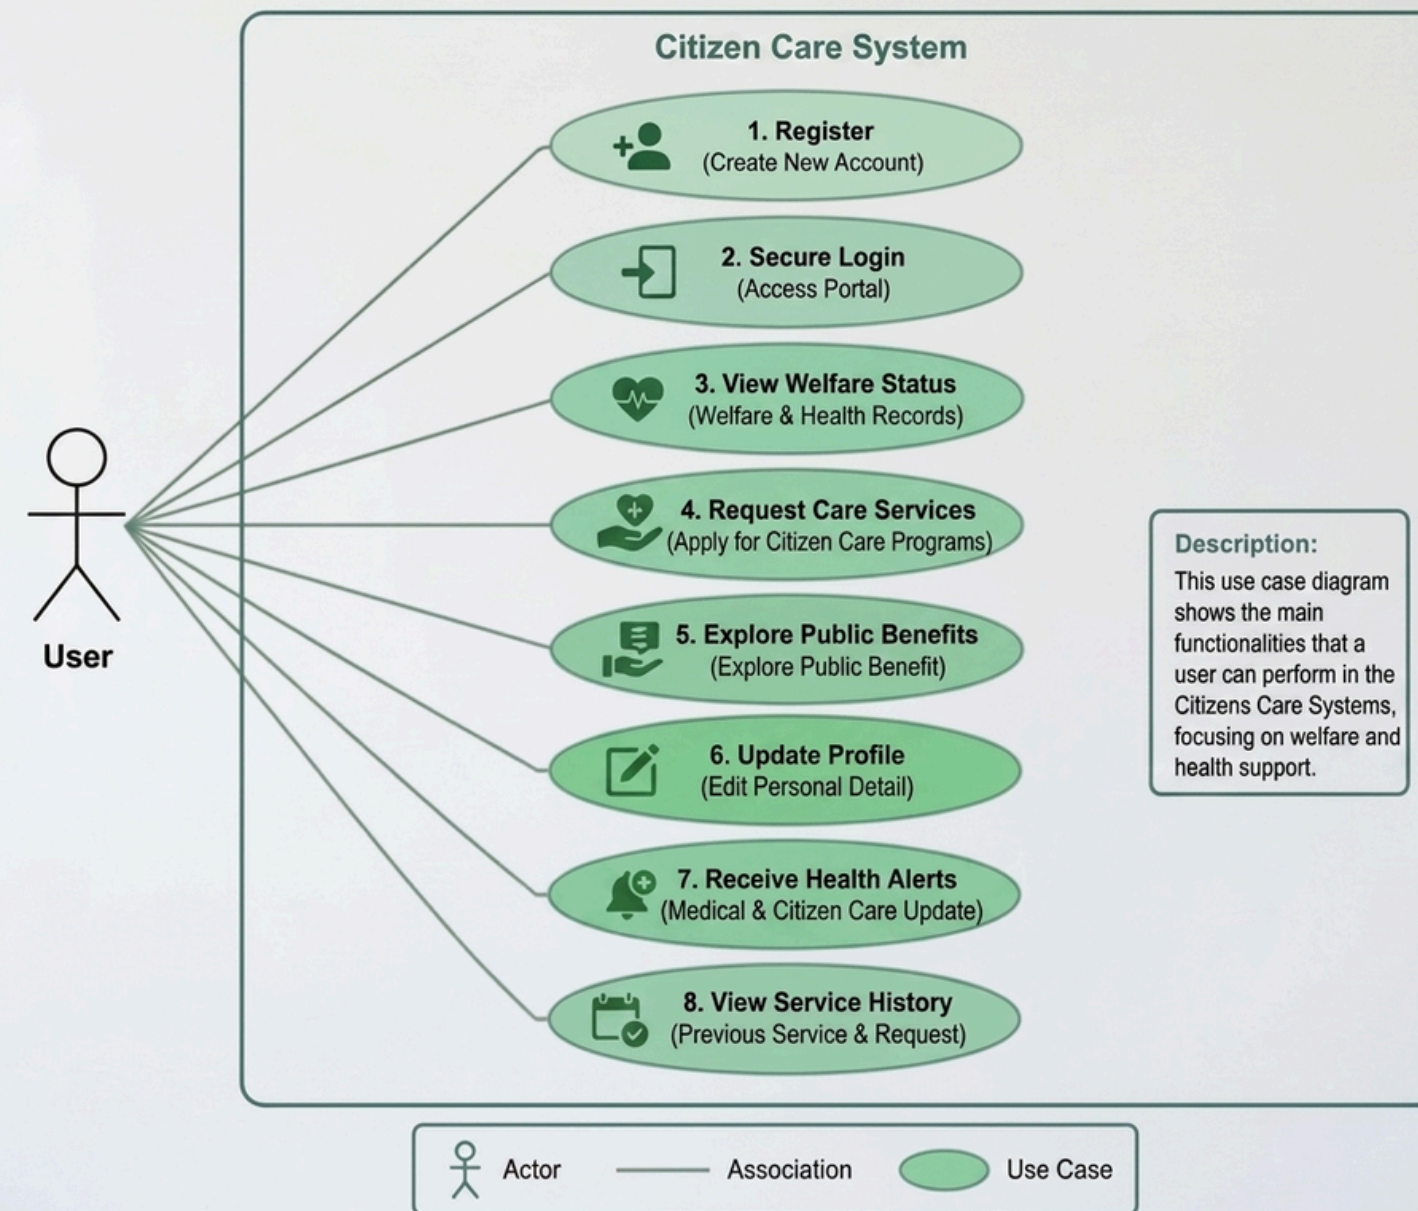

4

Continuous testing improves security and app quality.

REQUIREMENTS ENGINEER (SRS)

This section describes the requirements of the Citizen Care System , including how requirements were gathered, the use case diagram, and the functional requirements.

Use Case Diagram – Citizen Care System

FUNCTIONAL REQUIREMENTS

- Register account
- Login securely
- Display health status
- Book permits
- Provide services
- Update profile
- Send notifications
- Show user history

NON FUNCTIONAL REQUIREMENTS

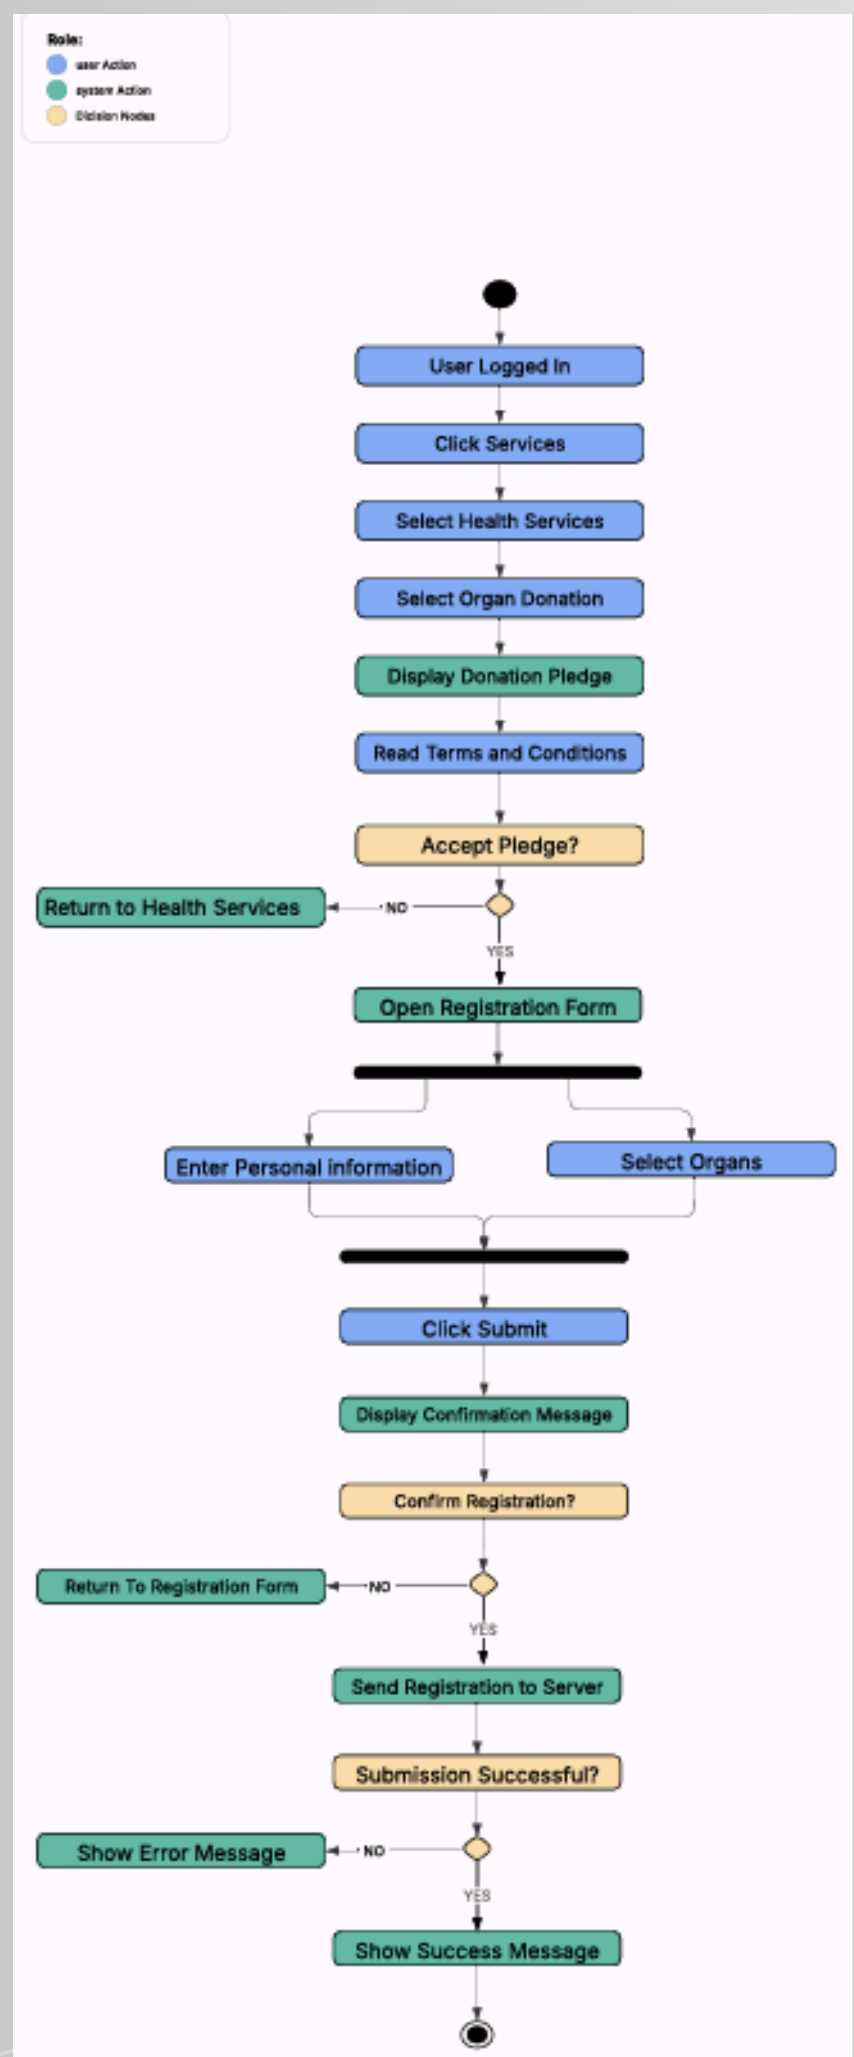

- Security → protect data
- Performance → fast response
- Usability → easy to use
- Availability → 24/7 system

EXTERNAL INTERFACE REQUIREMENTS

- Mobile app interface
- Works on smartphones
- Connects with government systems

CONCLUSION

In conclusion, Citizen Care System is a secure and easy-to-use system that helps users access digital government services efficiently.

This project shows how software engineering can be used to design a clear, organized, and reliable system.

THANK YOU
